

Airport Information

Details for LUQA	
City	MALTA
State/Province	
Country	MLT
Latitude	N 35° 51' 27.15"
Longitude	E 14° 28' 38.78"
Elevation	300
Longest Runway	11600
Magnetic Variance	E 2.0°
Fuel Type	100 Low Lead (LL) octane fuel is available JET A-1 fuel is available
Oxygen	Oxygen facilities are unavailable.
Repair Facility	Minor airframe repairs are available. Minor engine repairs are available.
Landing Fee	There is a landing fee.
Jet Start Unit	A starting unit is not available at the airport.
Precision Approach	Availability is Unknown.
Beacon Light	A beacon light is available.
Customs Facilities	Customs are available without restriction
Usage Type	Airport/Heliport is open to the public.
Time Zone Conversion	-1:00=UTC
Daylight Savings	Airport observes daylight savings time
Change Notices Available	none

1. GENERAL

1.1. ATIS

ATIS 127.4

1.2. NOISE ABATEMENT PROCEDURES**1.2.1. GENERAL**

The following procedures are applicable to all ACFT with a MTOW of more than 5700 KGS and may at any time be departed from to the extent necessary for avoiding immediate danger or for complying with ATC instructions.

1.2.2. RUNWAY USAGE

Due to noise abatement and noise distribution, ATC will select RWY 13 as the main RWY for landings and take-offs between 1800-0600LT and RWY 31 between 0600-1800LT.

1.3. TAXI PROCEDURES

TWY A loop is intended for clockwise access only. Stop bar A1 is intended to provide a RWY holding point in the event of exceptional use of TWY A in the reverse direction.

Taxilane M MAX wingspan 171'/52m.

TWY B and Taxilane I from stand 1 thru 5, K and TWY P MAX wingspan 118'/36m.

TWY K between holding position K and THR 23 MAX wingspan 95'/29m and may be used with CAUTION by ACFT with wingspan of 79'/24m and above.

Taxilane N and TWY Q between holding position Q1 and Apron 7 MAX wingspan 79'/24m.

TWY B between holding position B and SAFI Apron towing required.

Follow-me car required at NIGHT in Apron 5 and TWY P.

Follow-me car will be provided to ACFT taxiing to stands 18X and 21X on Apron 9.

Follow-me car will be provided to code D ACFT entering Apron 4.

1.4. PARKING INFORMATION

On Apron 2, push-back mandatory. Self-manoeuvring allowed when adjacent stands vacant.

On Apron 4, use CAUTION to reduce the effects of jet blast.

On Apron 8, stands to be used with marshaller guidance. Apply MIM 55° nose-gear angle on power turn-out from all stands.

On Apron 3 and 9 all stands and on Apron LTM stand 1, to be used with marshaller guidance.

On Apron 9 stands 1 thru 8, apply MIM 55° nose-gear angle on power turn-out to maintain wingtip clearances.

Access to stands 18X and 21X only via Taxilane X.

Stands 1H and H1 available for helicopters.

1.5. RWY OPERATIONS**1.5.1. PREFERENTIAL RWY SYSTEM (PRS)**

RWY in USE (RIU) for IFR is RWY 31 from 0600LT to 1800 LT and RWY 13 from 1800LT to 0600LT.

RWY 05/23 used for VFR flights.

The PRS is not applicable when:

- tailwind component for the selected RIU consistently exceeds 5 KT in dry conditions.
- tailwind component for the selected RIU consistently exceeds 5 KT including gusts in wet conditions.
- ILS and/or DME is not available for the selected RIU, though still available for the reciprocal RWY.

1. GENERAL

- crosswind component consistently exceeds 25 KT in dry conditions or 15 KT in wet conditions, RWY 05/23 shall be declared as RIU, with RWY 13/31. When ceiling is less than 2000' or visibility is less than 5000m, RWY 13/31 shall be declared as RIU with RWY 05/23 as departure RIU. ACFT unable to use RWY 05/23 due to instrument APCH, RWY or associated TWY limitations, will be vectored by ATC for RWY 13/31.
- wind shear has been reported or forecast or when thunderstorms are expected to affect the APCH.

1.6. OTHER INFORMATION

Birds in vicinity of APT.

First 1969'/600m of RWY 05 not completely visible from Control Tower.

ACFT performing idle runs on LTM Apron shall be aligned along the blue centerline and nose gear markings provided to maintain wingtip clearances.

Engine ground run-ups above idle power are prohibited 2300LT - 0600LT unless exceptional overriding operational requirements exist. At all other times, ground running is to be kept to the minimum consistent with operational needs.

1.6.1. Control of circuit traffic

Standard circuit patterns are:

- RWY 05: Right hand circuit.
- RWY 13: Right hand circuit.
- RWY 23: Left hand circuit.
- RWY 31: Left hand circuit.

For Code A and B ACFT variable circuit patterns are applicable as required by ATC. All circuits for Code A and B ACFT shall not be conducted above 1500'. Due to heavily build-up areas and critical infrastructure to the East of the island non-standard circuit patterns for Code C, D, E and F ACFT are only authorized by ATC when required due to operational reasons. Unless otherwise advised by ATC, all circuits for Code C, D, E and F shall be conducted not above 2000'.

Circuit flights may be transferred to Luqa APCH for vectoring into a sequence of arrivals.

2. ARRIVAL

2.1. NOISE ABATEMENT PROCEDURES

When vectoring ACFT to the ILS on RWY 13, ATC will normally clear arriving ACFT to intercept GP at 3000'. Pilots should not request to intercept GP at an altitude less than 3000' unless required for operational reasons.

ACFT using the ILS shall, unless otherwise instructed by ATC:

- leave initial approach fix at 210 KT \pm 10 KT, maintain until 9 NM from touchdown (unless higher IAS is required for control purposes);
- reduce to 160 KT \pm 10 KT using an intermediate flap setting with landing gear retracted;
- intercept GP not lower than prescribed GP interception altitude;
- lower landing gear, set flaps for landing and establish final approach speed between 4 NM and 5 NM from touchdown.

ACFT approaching without ILS shall, while maintaining as high an altitude as practicable:

- follow a descent path which will not result in its being, at any time, lower than the approach path which would be followed by an ACFT using the ILS GP;
- fly as much as possible over the sea if executing a visual approach for RWY 31.

2. ARRIVAL

2.2. RWY OPERATIONS

2.2.1. RWY VACATION PROCEDURES

Unless otherwise instructed by ATC, pilots should plan to vacate the RWY after landing at the appropriate exit TWYs as follows:

RWY 05: MEDIUM ACFT via TWY J.

RWY 13: MEDIUM ACFT via TWY C or D. HEAVY ACFT via TWY C or D or due to a long landing roll, vacate via TWY A.

RWY 23: MEDIUM ACFT via TWY L.

RWY 31: MEDIUM ACFT via TWY E or F. HEAVY ACFT via TWY E or F due to a long landing roll, vacate via TWY G.
ACFT assigned to Apron 1 or Apron 8 should plan to vacate via TWY G.
ACFT assigned to Apron 2 thru Apron 7 or Apron LTM should plan to vacate via TWY Y.

2.3. OTHER INFORMATION

2.3.1. GENERAL

Colour contrast between the old and newly paved sections of the surface of RWY 13/31 may potentially give a false impression of height during the final stages of apch.

2.3.2. ARRIVAL PROCEDURES

ACFT should expect to be radar vectored to a instrument APCH to the landing RWY in use (RIU) RWY 13/31 or to visual APCH on RWY 05/23.

Requests for a visual APCH on RWY 31 are allowed subject to traffic operation in the circuit and the landing sequence. When a visual APCH is approved by ATC, the pilot should expect a initial clearance to descend not below 3000'. Follow instruction to continue the APCH below 3000' should normally be expected after the ACFT crosses RWY 05/23 axis.

2.3.3. HOLDING

When Holding is anticipated, ATC will clear IFR arrivals as follows:

RWY	Navaid/Waypoint	Clearance limit
RWY 05	GZO	Clearance limit to expect radar vectors for visual APCH.
RWY 13	GZO	Clearance limit to expect ILS or NDB APCH.
RWY 23	GZO	Clearance limit to expect radar vectors for visual APCH.
RWY 31	OLBIX	Clearance limit to expect ILS APCH.
RWY 31	MLT	Clearance limit to expect NDB APCH.

3. DEPARTURE

3.1. START-UP & TAXI PROCEDURES

All flights should request clearance delivery with Ground Movement Control (GMC) prior to requesting start-up clearance.

All ACFT should request start-up clearance from GMC. Requests for start-up clearance shall not be made earlier than 5 minutes before planned start-up. Any delays in start-up should be communicated to ATC as early as possible.

On Apron 8, use CAUTION to reduce effect of jet blast when taxiing out of apron.

3.2. NOISE ABATEMENT PROCEDURES

3.2.1. GENERAL

Take-off to 1800'

Take-off power

Take-off flaps

Climb at $V_2 + 10$ KT to 20 KT (or as limited by body angle).

At 1800'

Reduce thrust to not less than climb power/thrust.

1800' - 3300'

Climb at $V_2 + 10$ KT to 20 KT.

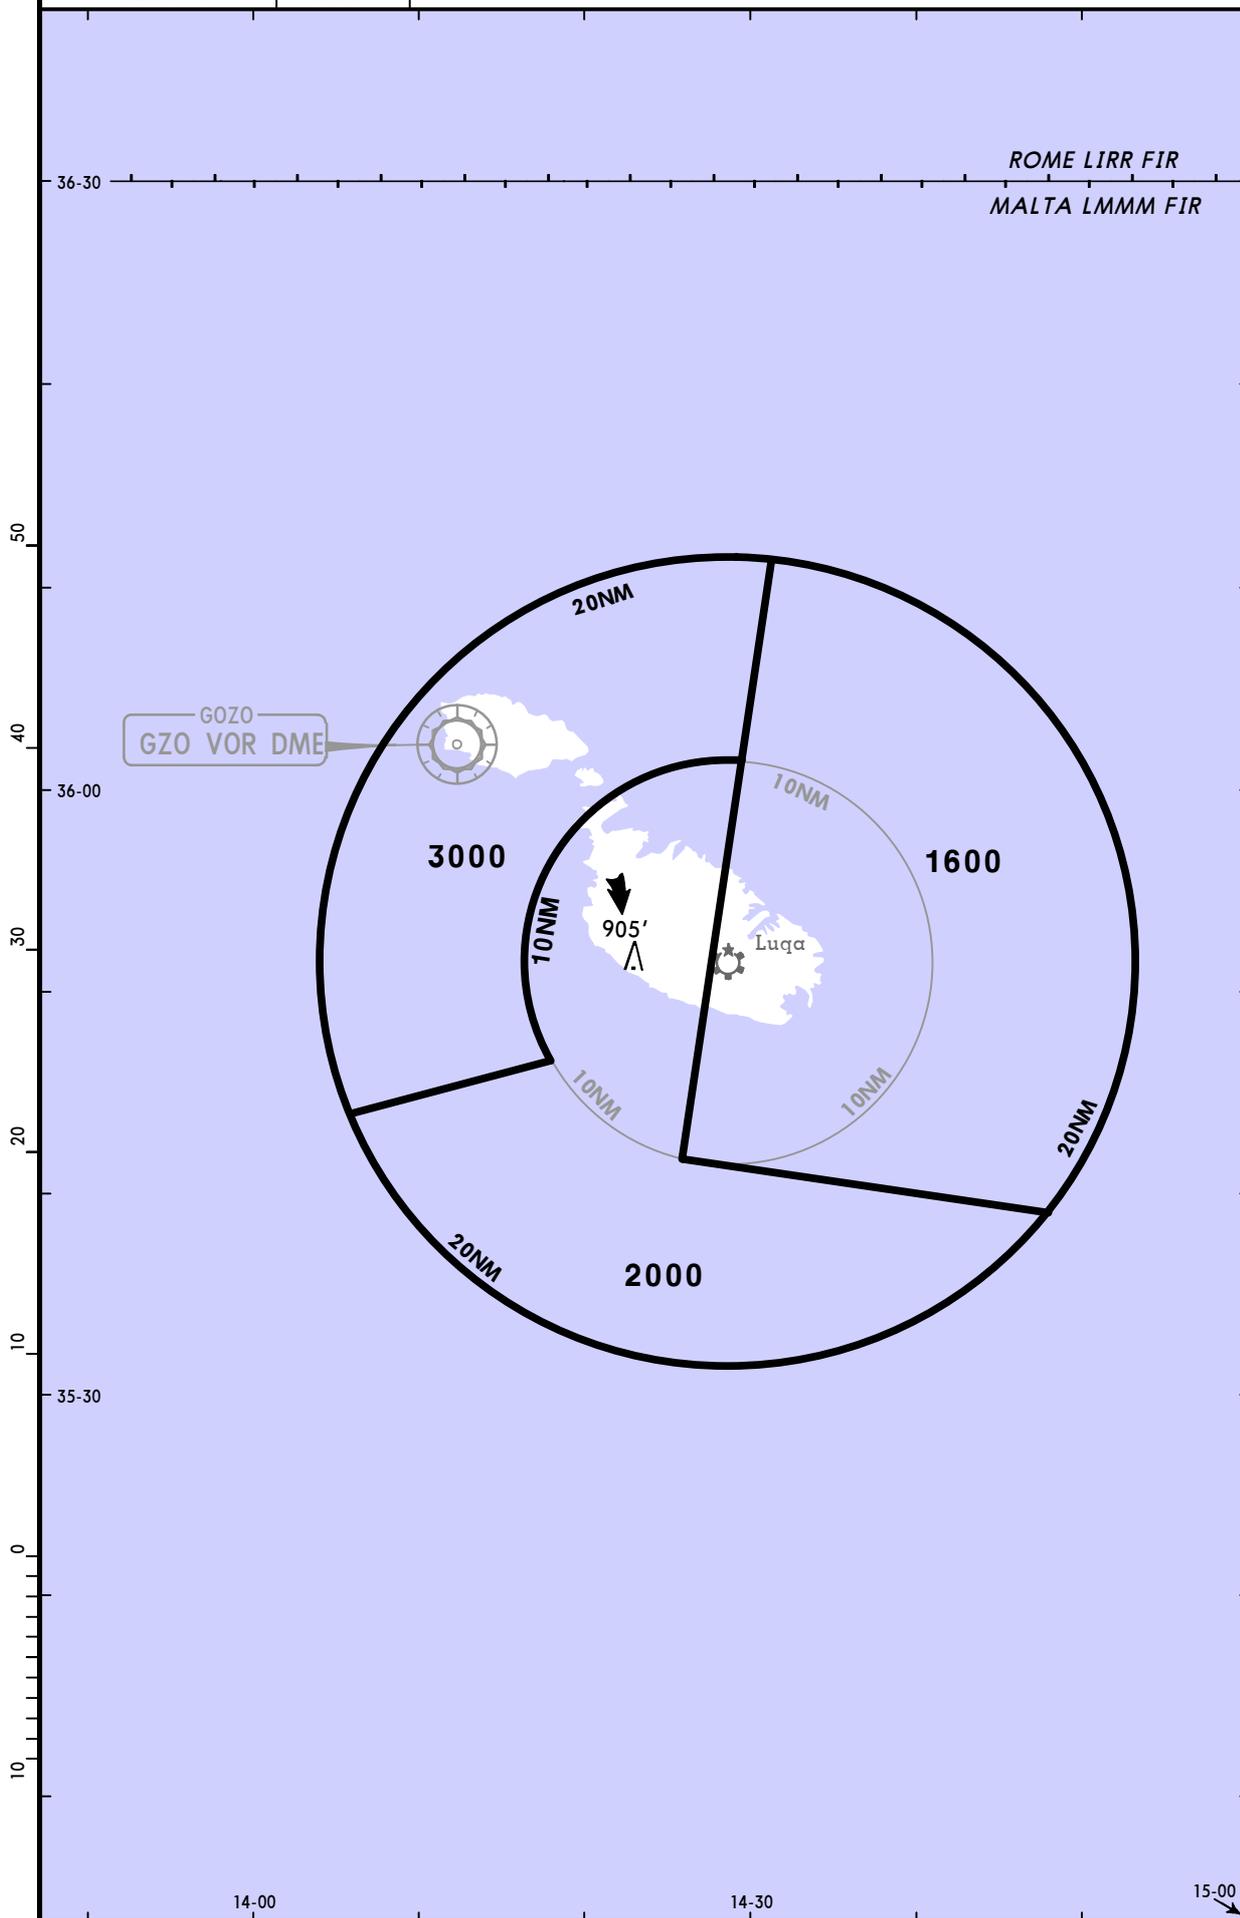

At 3300'

Accelerate smoothly to en-route climb speed with flap retraction on schedule.

LUQA Radar (APP)
128.15
